Players put their skins on a virtual roulette table, pick a colour or a specific number, and view a wheel spin in real time. The outcome is figured out by a provably-fair algorithm that mirrors the 0-38 (European) or 0-00-38 (American) design of conventional roulette.

Feature	Traditional Roulette	Roulette CS2
Betting units	Cash chips	CS2 skins, "skin-coins", or platform-specific tokens
Wheel design	37 numbers (0-36)-- European; 38 numbers (0-36 + 00)-- American	Identical numerical design; in some cases a "skin-only" wheel that collapses numbers into colour groups
Result verification	Physical wheel, dealer oversight	Cryptographically signed server seed + customer seed (provably-fair)
House edge	2.7% (European)/ 5.26% (American)	Varies-- typically 2%-- 4% depending on platform & bet type

The principle is basic, but the surrounding community is anything but. Due to the fact that skins can be exchanged for real-world cash on the Steam marketplace, a win on Roulette CS2 can equate into a tangible profit-- or a loss that feels just as genuine.
