- **The Gambler's Fallacy:** If a gamer throws Paper 3 times in a row, challengers heavily presume they will change to Rock or Scissors on the fourth toss.

Proven Winning Strategies

- **The Conditional Response Strategy:** Anticipate your challenger's reaction to the previous round. If you won the last round with Rock, anticipate your challenger to change to the product that beats Rock (Paper). For that reason, you should toss Scissors.
- **Game Theory Optimal (GTO):** Play with outright randomness. Utilize a digital randomizer or entirely separate your mind from pattern-making so that your challenger can not exploit your routines.
