Standard Russian Roulette Probabilities

Chambers in Cylinder Filled Cartridges Probability of Fatality (Per Pull) Percentage Risk 6 1 1 out of 6 16.67% 6 2 2 out of 6 33.33% 5 1 1 out of 5 20.00% 7 1 1 out of 7 14.28%

When players spin the cylinder and allow it to stop at random, each chamber theoretically has an equal and independent probability of aligning with the barrel, assuming the weight of the cartridge does not subtly bias the spin (a phenomenon greatly debated by physicists and bettors alike, though rendered largely moot by the stakes).
