Volatility Levels

Volatility dictates how payments are distributed:

- **Low Volatility:** The ball often lands in the center slots, returning quantities near or slightly higher/lower than the original bet. This mode maintains bankrolls longer but minimizes enormous wins.
- **Medium Volatility:** A well balanced approach where gamers experience a mix of small returns and moderate edge multipliers.
- **High Volatility:** The center slots use extremely low payouts (typically less than the bet), however the external edges unlock huge multipliers. This mode needs a larger bankroll and high tolerance for danger.
