

Why Cannabis Flower 112g Is the Sweet Spot for Stocking Up

There is a moment every regular buyer knows. You open the jar, see the last few buds, and realise it is time to restock. The question is always how much to get at once. Too little and you are back at the shop in a week. Too much and you worry about freshness, storage, or just tying up too much cash at once. Over the years, I have found that a 112g purchase hits a practical middle ground that works for most people who vape or smoke daily. That amount gives you room to explore different strains without committing to a single half-pound that might get stale before you finish it.

When I first started buying in bulk, I went straight for the largest option available. It seemed logical. More flower for less per gram, right? But I learned quickly that variety matters more than volume. A single heavy bag, even from a consistent producer like Pure Sunfarms or Edison Cannabis, starts to feel monotonous by week three. That is where buying a well-chosen cannabis flower 112g bundle shines. You get the economy of a larger order but with the ability to mix and match across different growers and genetics.

Why 112g Works for Daily Use

A hundred and twelve grams is roughly four ounces. For someone who goes through about a gram and a half per day, that order lasts around ten to eleven weeks. That is long enough to justify the purchase without the flower sitting around for half a year. The key is choosing the right mix of strains so that your rotation stays interesting. I like to include at least one sativa-dominant option for daytime, something like a bright, citrus-forward **Sunny D lime** from a grower like **Broken Coast** or **Simply Bare**. That strain gives a clean, energising lift that works well before a walk or creative work.

For evenings, I reach for something heavier. A batch from **Royal City** or **Tantalus Labs** often delivers the kind of sedating, resin-heavy buds that pair well with unwinding. The terpene profiles differ enough that you do not build a tolerance to the same dominant compound. Switching between a limonene-heavy sativa and a myrcene-dominant indica keeps the experience fresh. That is the real advantage of buying a [cannabis flower 112g](#) bundle rather than a single strain in bulk.

MIX FLOWER

8 x 28 Grams

Choosing the Right Mix of Growers

Not all flower ages the same way. Some strains hold their moisture and terpenes better over a couple of months. In my experience, flower from **San Rafael '71** and **Pedarios** tends to stay vibrant because of careful curing and good packaging. Their buds arrive with a stable moisture level that does not dry out too fast. On the other hand, some very dry flower from certain value-oriented producers can turn brittle within three weeks of opening the bag. That is why I recommend buying a cannabis flower 112g assortment that balances a few premium jars with some more affordable options. You get the best of both worlds.

One of my regular rotations includes a jar of **Pure Sunfarms** Pink Kush for baseline relaxation, a jar of **BC Green** for a piney, clean sativa, and a jar of **Bandwagon** for something middle-of-the-

road. Sometimes I swap one out for a **Muskoka Grown** offering if I want a more earthy, skunky profile. The point is that 112g gives you enough volume to split across three to four different jars, each from a different producer, without any single jar sitting open for more than a few weeks.

Storage Matters When You Buy in Quantity

If you are buying 112g at once, you need to store it properly. I keep my flower in airtight glass jars with a humidity pack, usually a 62% Boveda. That keeps the buds from drying out or getting too damp. I also store the jars in a cool, dark cabinet. Light and heat degrade terpenes fast, and nobody wants flower that smells like hay. If you buy from a trusted source, the flower arrives already well-cured, but your job is to keep it that way.

I have made the mistake of leaving a jar of **Flowr** on a sunny windowsill for a week. The colour faded, the aroma flattened, and the vapour became harsh. That is a waste of good money. So if you are stocking up, plan your storage before you open the bags. A simple setup with a few mason jars and a dark drawer works perfectly.

Other Products That Complement a Flower Purchase

When I place a larger flower order, I often throw in some **hash** or a pack of **prerolls** for convenience. Hash is great for a change of pace, especially if you have a high tolerance and want something that hits harder without smoking more flower. Prerolls from **Ogen** or **North Star** are handy for times when you do not want to grind and pack a bowl. They are also useful for travel or sharing with friends.

The combination of flower, hash, and prerolls covers every situation. At home, you vape the flower. On the go, you light a preroll. When you want a deeper effect, you crumble some hash into the bowl. A 112g flower purchase gives you the foundation, and the extras are just a small addition.

Regional Gems Worth Seeking Out

Canada has a wealth of excellent growers, and some of the best flower comes from British Columbia. **Pemberton** and **Kelowna** are regions known for producing potent, terpene-rich buds. I have had great batches from **Simply Bare** that tasted like fresh pine and lemon zest, and from **Broken Coast** that delivered a smooth, creamy smoke. These are not just names on a label; they reflect real growing conditions and craft.

When you are building a 112g order, try to include at least one strain from a smaller, regional producer. The difference in flavour and effect is noticeable. Mass-produced flower can be consistent, but it sometimes lacks the nuance of a small-batch cure. A jar of **Pedarios** or **Edison Cannabis** often shows that extra attention to detail in the trichome density and the complexity of the smoke.

Final Thoughts on the 112g Format

Buying in the 112g range is not for everyone. If you only smoke once a week, a smaller amount makes more sense. But if you consume daily or near-daily, the economics and variety of a 112g bundle are hard to beat. You save money per gram, you get to try multiple strains, and you avoid the hassle of frequent orders. Just remember to store it right and rotate your jars to keep each strain at its best.

The market has matured enough that you can find high-quality flower from dozens of reputable producers. Whether you lean toward the bright citrus of **Sunny D lime** or the heavy sedation of a **Royal City** indica, the 112g format gives you the flexibility to build a stash that suits your preferences. That is the sweet spot for anyone who values both quality and practicality.
