- **Third-Party Market Adjustments**-- Most CS2 gambling establishment websites utilize their own cost feeds, typically 5%-- 10% lower than Steam costs to safeguard against fast price swings.

3.2. Conversion to Play Money

When a gamer trades a skin to the gambling establishment, the platform assigns a **chip value** based on the site's conversion rate. For example:

Skin (Example)	Steam Market Price	Site Conversion Rate (-- 7%)	Chip Value
AK-47 Redline (Classified)	£ 13.00	£ 12.09	M4A4 Howl (Contraband) £ 320.00
		£ 297.60	

The chip value is then used to position bets. If the player wins, the payout is determined in chips and later on transformed back into skins at the very same rate.
