

Controlling humidity in a basement is a key focus of JLB Foundation Repair and Basement Waterproofing's waterproofing services for Gladstone area homes. Proper waterproofing, including a sealed vapor barrier and appropriate ventilation or dehumidification, can significantly reduce basement humidity, an important improvement for most homes. High humidity in [basement waterproofing](#) a basement contributes to mold growth, musty odors, and can even affect air quality throughout the rest of the home due to the stack effect drawing air upward.

JLB Foundation Repair and Basement Waterproofing | 111 NE 72nd St Ste 111, Gladstone, MO 64119 | (816) 408-3651

JLB's team assesses the specific humidity and moisture conditions in each basement before recommending a waterproofing approach tailored to the home's particular needs. For basement humidity control in Gladstone MO, contact JLB Foundation Repair and Basement Waterproofing at (816) 408-3651.
