Comprehending the Mechanics of Case Battles

A case battle is a head-to-head or multi-player contest where each participant opens the exact same set of CS: GO cases. The gamer who obtains the most important product (or the greatest overall value) wins the pot. Due to the fact that the result is driven by the random number generator (RNG) that governs every case opening, the underlying mathematics correspond opening cases in a solo context. The only distinction is the competitive aspect: you're not simply battling the system, you're fighting other players who may have different methods.

The core metric to remember is **Expected Value (EV)** EV is computed as:

If the EV of a case is lower than its rate, the case is, usually, a losing proposal. Knowing which cases tend to use a higher EV helps a gamer select the most rewarding battles.
