

As OpenAI's technologies like **ChatGPT** and **ChatGPT Plus** continue to evolve, many university students are eager to explore the possibilities these tools offer, especially in creative coding and AI content generation. You might have heard about the coveted *\$100 Codex credits* or the *2,500 credits codex* packages. This blog post will explain how verified university students can get these credits, what they actually mean, and clear up some common misconceptions around free plans, trials, and subscription options like ChatGPT Plus.

Understanding OpenAI's Credits System

OpenAI uses a pay-as-you-go credits system for many of its AI models, including the Codex APIs for code generation. Here's a quick breakdown:

- **Credits:** The units you spend when you use OpenAI's API. Different models and requests cost different amounts of credits.
- **2,500 Credits Codex:** This is a common credit pack offered to new or qualifying users. It gives you 2,500 credits to spend on Codex model usage.
- **\$100 Codex Credits:** \$100 worth of credits can correspond to a larger number of codex credits, often used in student or special promotional offers, giving you a significant amount of usage power.

Think of credits as tokens in a video game that you use to unlock levels or features. The more credits you have, the more you can explore and experiment with OpenAI's capabilities.

How Verified University Students Can Get \$100 Codex Credits

If you're a university student, getting access to the **\$100 Codex credits** boost can be a game-changer. However, this isn't something you can just "grab" at will—you need to go through OpenAI's official verification and eligibility programs that target students specifically.

Verification and Eligibility Programs

OpenAI has partnered with verified university programs and sometimes runs targeted campaigns offering free or discounted credits to students who qualify. Here's how it usually works:

1. **Proof of Enrollment:** You need to verify your university status through an official email domain (.edu or similar) or a verification platform linked to your university.
2. **Sign-Up for Student Offers:** After verification, you may be invited to special offers or campaigns that include \$100 worth of Codex credits.
3. **No Obligatory Subscription Required:** Often, these credits are granted without needing to subscribe to ChatGPT Plus or any paid plans; however, terms vary by campaign.

Important: These offers are not free trials of ChatGPT Plus or any other subscription product. They strictly provide credit-based usage, allowing you to experiment with Codex models.

Are These Credits the Same as ChatGPT Free Plan or Trials?

It's vital to clarify that the OpenAI **free plan is not a trial of ChatGPT Plus**, and the student \$100 credit offers are not trials either.

- **Free Plan:** Provides limited access to ChatGPT with basic usage, no payments required, and no automatic upgrades.
- **Trial Offers:** Are targeted, time-limited access spots often given through campaigns, invites, or eligibility programs. They sometimes require attaching a credit card and might auto-renew depending on the terms.
- **\$100 Codex Credits for Students:** Usually tied to academic programs, allowing usage of the API specifically for code generation and other Codex functions—this is separate from ChatGPT or ChatGPT Plus subscription usage.

So, if you see “trial” mentioned in some blogs about the free plan, don't be misled—OpenAI explicitly separates the free usage access from these specialized offers and subscription products.

What Exactly Are 2,500 Codex Credits?

When you get a package of **2,500 credits codex**, you essentially have 2,500 units to spend on Codex API calls. How far those credits go depends on which Codex model you call and how complex your queries are.

Model	Approximate Cost per 1,000 Tokens	Credits Needed for 2,500 Tokens
Codex `code-davinci-002` (Example)	10 credits per 1,000 tokens	~25 credits
Codex `code-cushman-001` (Example)	5 credits per 1,000 tokens	~12.5 credits

This means that with 2,500 codex credits, you can accomplish hundreds of requests ranging from simple code completions to more complex programming tasks. These credits are especially useful for students working on coding projects, automated tutors, or AI-assisted development environments.

Quick Heads-Up When Using Credits

Always keep an eye on your credit usage in the **Settings - Subscription** section, so you know how many credits you've used and how many remain. This helps avoid surprise overages, especially if you attach a payment method!

If it's a free credits offer, beware of any auto-renewing subscriptions you did not authorize.

ChatGPT Plus and Its Relation to Credits

You might wonder how ChatGPT Plus fits into all this. ChatGPT Plus is a subscription plan you can access via the US web checkout for around **\$20/mo** before tax. It gets you faster response times, priority access to new features, and access to GPT-4 models on chat.openai.com. However, ChatGPT Plus operates differently from API credit [chatgpt plus worth it vs free](#) usage.

- **ChatGPT Plus (\$20/mo):** Is a monthly subscription billed through your account, not based on API or Codex credits.
- **Codex Credits:** Are mainly for API usage such as code generation or embedding models, often used by developers, students doing programming projects, or companies integrating AI.

Simply put, if you're a student interested in writing code with AI, those \$100 Codex credits or 2,500 Codex credits packages grant you powerful access beyond the ChatGPT Plus chat interface.

Trials and Confirmation Emails: Be Smart and Stay Informed

Here's a plain-language warning:

- **Free Plan ≠ Trial:** Don't call the free plan a trial or expect a standard 30-day trial on ChatGPT Plus or credits. Trials are special promotional, invite-only, or eligibility-based.
- **Check Confirmation Emails:** After signing up for any offer, including student or trial credits, OpenAI sends a confirmation email. Make sure you read it carefully and know what you signed up for.
- **No Surprise Charges:** If you attached your credit card, be aware some trial offers or subscriptions auto-renew. You're responsible for checking this in **Settings - Subscription**.

Ignoring these details often leads to "surprise" charges, which can be avoided with a few minutes of attention.

Summary: What To Do Next

1. Verify your university status through OpenAI's official verification channels if you want the \$100 Codex credits or 2,500 credits codex offers.
2. Distinguish between the free plan, trials, and paid subscriptions like ChatGPT Plus when choosing your usage path.
3. Keep a close eye on your **Settings - Subscription** page for credits usage and billing info.
4. Read all confirmation emails carefully to avoid confusion or unexpected charges.
5. Use your credits wisely for educational programming projects, creative AI experiments, or learning to code with AI assistance.

By understanding the nuances around OpenAI's credits system, student verification programs, and subscription options, you can get the most out of your AI experience—without the common pitfalls of calling the free plan a "trial" or missing essential details about credit card charges.

Ready to explore? Head over to OpenAI's official website, verify your university email, and see if you qualify for those valuable \$100 Codex credits today!
