Gamers position a stake and navigate a grid filled with concealed tiles. Behind these tiles lie either multipliers (gems, coins, or gold) or mines.

The goal is easy: reveal as lots of multipliers as possible without clicking a mine. Each effective click increases the player's potential payout, while striking a mine lead to the loss of the existing stake. The core appeal of the game depends on the "cash out" mechanic, which permits players to secure their earnings anytime before proceeding to the next tile.

How the Game Mechanics Work

The game depends on a Provably Fair algorithm, ensuring that the positioning of mines is randomized and proven. When a round starts, the server produces a grid-- generally 5x5-- and distributes a predetermined variety of mines throughout it. The gamer then connects with the grid in the following sequence:

1. **Setting the Parameters:** Before the very first click, the player selects their bet amount and the variety of mines they wish to consist of in the grid (e.g., 1 to 24 mines in a 25-tile grid).
2. **The Reveal:** The player clicks a tile. If it is a multiplier, the balance increases, and the player can pick to "Cash Out" or continue.
3. **The Risk:** If a mine is set off, the round ends immediately, and the stake is surrendered.
4. **The Multiplier Growth:** The more mines chosen at the start, the greater the multiplier for each successful tile opened.

Comprehending Risk vs. Reward

The table below illustrates how different mine counts affect the possible development of a gamer's preliminary stake.

Variety of Mines	Multiplier (Tile 1)	Multiplier (Tile 5)	Multiplier (Tile 10)
1 Mine	1.04	1.22	1.55

5 Mines	1.23	2.80	9.80
