How Transactions Work: Steam API and P2P Trading

In the past, CS2 gambling websites used bots that straight traded with gamers by means of Steam accounts. Nevertheless, Valve has punished automated trading bots throughout the years by carrying out trade lock durations (items traded can not be re-traded for 7 days) and upgrading API security.

Today, most platforms utilize **Peer-to-Peer (P2P) systems**.

1. When a player desires to deposit, the site sets them with another player wanting to cash out.
2. The depositing player sends out the skin straight to the buyer by means of a safe Steam trade link.
3. The site credits the depositor's account balance once the trade is validated.

This technique helps platforms prevent direct involvement in handling Valve's inventory products while keeping the virtual economy flowing.
