The core appeal of the game lies in the "cash out" mechanic, which permits gamers to protect their earnings anytime before continuing to the next tile.

How the Game Mechanics Work

The game depends on a Provably Fair algorithm, ensuring that the placement of mines is randomized and verifiable. When a round begins, the server creates a grid-- generally 5x5-- and distributes an established variety of mines throughout it. The player then interacts with the grid in the list below sequence:

1. **Setting the Parameters:** Before the very first click, the player selects their bet quantity and the number of mines they want to include in the grid (e.g., 1 to 24 mines in a 25-tile grid).
2. **The Reveal:** The gamer clicks a tile. If it is a multiplier, the balance increases, and the player can pick to "Cash Out" or continue.
3. **The Risk:** If a mine is activated, the round ends quickly, and the stake is forfeited.
4. **The Multiplier Growth:** The more mines picked at the start, the higher the multiplier for each effective tile opened.
