Instead of a single gamer opening a case in seclusion, several players (generally in between two and 4) pool their resources to open the precise same set of cases at the same time.

The mechanics are basic yet thrilling:

1. **The Buy-in:** All individuals contribute a set amount of money to buy a predetermined selection of cases.
2. **The Drop:** The cases open automatically in rounds, revealing random weapon skins for each gamer.
3. **Ball game:** The total worth of all the skins dropped for each player is determined at the end of the battle.
4. **The Winner:** The gamer (or group) with the greatest cumulative skin worth takes home *all* the drops from every participant.

If somebody drops a knife worth £ 500, and the total value of their drops exceeds everyone else's, they win the whole pot-- including the opponent's skins.
